Journal of Economic Entomology Publisher: Entomological Society of America Journal of Economic Entomology publishes articles on the economic significance of insects, and includes sections on apiculture and social insects, insecticides, pest control, household and structural insects, and crop protection. Article Types Research Articles Report original observations and experiments, the results of the experiment, and a discussion of the significance of the results. There is no word limit for research articles. Review Review articles review and synthesize current information on a topic. Review articles can also contain historical threads of important ideas (i.e., are not confined to recent citations). There is no word limit for review articles. Forum Forum articles are authored by acknowledged leaders in the field, review a research area, and include a stimulating, thought-provoking discussion that focuses on important, and sometimes controversial, issues. They should provide an innovative approach to current thought and speculate about future research directions. Short Communications Short communications should be similar to a research article, but with briefer Materials and Methods and Discussion. Total length should be 2,000 words or less. Letter to the Editor JEE will consider submissions in the form of a letter to the editor in which the authors express their viewpoint on scientific issues. Appropriate content can include comments or criticisms in reference to a published paper, whether or not in an ESA journal, or comments and opinions unrelated to a specific published paper. A letter will be limited to 2,000 words, 10 references, and one table or figure. The Editor-in-Chief (EIC) will judge whether a submitted letter merits consideration for potential publication based on relevance, inherent interest, and coherence of the submission, but with a view to allowing a range of opinions to be expressed. If the EIC considers the submission to be suitable in principle, he/she will send it to at least one anonymous reviewer for comments and will edit it for style and appropriate language before returning it to the corresponding author for revisions. More information on letters to the editor can be found on our Journal Policies page. Title Page The title page should include: Corresponding author: Include full name, mailing address, telephone number, and email address. Title: Should be as short as possible. Only include common names that are listed in the ESA Common Names of Insects & Related Organisms. Do not include authors of scientific names. Insert “[Order]” [Family]” immediately after the name of the organism. Author list: Include all authors in the order the names should be published. Affiliation line: Include full addresses of all authors. If there are multiple affiliations, designate through numbered footnotes. Abstract 250 words or less. Give scientific name and authority at first mention of each organism. Do not cite references, figures, tables, probability levels, or results. Refer to results only in the general sense. A second abstract in a second language is permitted. Keywords Below the abstract, provide three to five keywords, separated by commas. Do not use abbreviations, combined keywords, or species names. Sample title page. Body Introduction Clearly state the basis of your study along with background information and a statement of purpose. Materials and Methods Include a clear and concise description of the study design, experiment, materials, and method of statistical analysis. Results Clearly present the results. Do not include interpretation of results or interpretation of statistical analysis—simply present the results of the experiment and the results of the statistical analysis. Data listed in tables should not be listed in the results; instead, refer to the table. Discussion Interpret and discuss results of the study and their implications. Include suggestions for direction of future studies, if appropriate. Acknowledgments Place the acknowledgments after the text. Organize acknowledgments in paragraph form in the following order: persons, groups, granting institutions, grant numbers, and serial publication number. Following the Acknowledgments, you may include a statement of author contribution outlining the specific contributions of each author to the article. A statement of author contribution is welcomed but not required. References EndNote style is “Environmental Entomology,” and Reference Manager style is “Journal of Medical Entomology.” Only cite published or formally accepted (in press) articles, not submitted articles. References should be in alphabetical order. If multiple references from the same author are cited, those references should be in chronological order. Abbreviate journal titles according to the most recent issue of BIOSIS Serial Sources. For non-English titled journals that are cited in the references, the title of the journal should be spelled out. Systematics-related articles may specify that all serial titles be spelled out for final publication. Sample reference styles Journal Articles Evans, M. A. 2000. Article title: subtitle (begin with lowercase after colon or dash unless first word is a proper noun). J. Abbr. 00:000-000. Evans, M. A. 2001a. Article title. J. Abbr. 00: 000-000. Evans, M. Abbr. 00: 000-000. Evans, M. A., R. Burns, and A. A. Dunn. 2001. Article title. J. Abbr. 00: 000-000. In Press Evans, M. A. 2002. Article title. J. Econ. Entomol. (in press). Books Burns, R. 2001. Title (initial cap only); subtitle (no initial cap after colon). Publisher, city, state abbreviation or country. Evans, M. A. 2001. Colorado potato beetle, 2nd ed. Publisher, city, state abbreviation or country. Tyler, A. 2001. Western corn rootworm, vol. 2. Publisher, city, state abbreviation or country. Article/Chapter in Book Tyler, A. 2001. Article or chapter title, pp. 000-000. In T.A.J. Royer and R. B. Burns (eds.), Book title. Publisher, city, state abbreviation or country. Tyler, A., R.S.T. Smith, and H. Brown. 2001. Onion thrips control, pp. 178-195. In R. S. Green and P. W. White (eds.). Book title, vol. 13. Entomological Society of America, Lanham, MD. No Author Given (USDA) U.S. Department of Agriculture. 2001. Title. USDA, Beltsville, MD. (IRRI) International Rice Research Institute. 2001. Title. IRRI, City, State or Country. Patents Harred, J. F., A. R. Knight, and J. S. McIntyre, inventors; Dow Chemical Company, assignee. 1972 Apr 4. Epoxidation process. U.S. patent 3,654,317. Proceedings Martin, P. D., J. Kuhlman, and S. Moore. 2001. Yield effects of European corn borer (Lepidoptera: Pyralidae) feeding, pp. 345-356. In Proceedings, 19th Illinois Cooperative Extension Service Spray School, 24-27 June 1985, Chicago, IL. Publisher, City, State. Rossignol, P. A. 2001. Parasite modification of mosquito probing behavior, pp. 25-28. In T. W. Scott and J. Grunstrup-Scott (eds.), Proceedings, Symposium: the Role of Vector-Host Interactions in Disease Transmission, National Conference of the Entomological Society of America, 10 December 1985, Hollywood, FL. Miscellaneous Publication 68. Entomological Society of America, Lanham, MD. Theses/Dissertations James, H. 2001. Thesis or dissertation title. M.S. thesis or Ph.D. dissertation, University of Pennsylvania, Philadelphia. Software SAS Institute. 2001. PROC user's manual, version 6th ed. SAS Institute, Cary, NC. Online Citations Reisen, W. 2001. Title. Complete URL (protocol://host.name/path/file.name) and/or DOI (Digital Object Identifier) Tables Tables should be editable tables in a Word document. If a table contains on more than one page, repeat column headings on subsequent page(s). All columns must have headings. Leave no space between lowercase letters and their preceding values (e.g., 731.2ab). Do not footnote the title—use the unlettered first footnote to include general information necessary to understand the title (e.g., define terms, abbreviations, and statistical tests). Use approved abbreviations or abbreviations already defined in the text and define others in the general footnote. Use the following abbreviations in the body or column headings of tables only: amt (amount), avg (average), concn (concentration), diam (diameter), exp (experiment), ht (height), max (maximum), min (minimum), no. (number), prepn (preparation), temp (temperature), vs (versus), vol (volume), wt (weight) Jan (January), Feb (February), Mar (March), April, May, June, July, Aug (August), Sept (September), Oct (October), Nov (November), and Dec (December). Sample table Figures Figures should be at least 300 dpi, or 1200 dpi for line graphs. The quality in which figures are submitted is the quality in which they will print—please ensure figures are high quality. The following file types of figures are accepted: tif (preferred), eps (preferred), rtf, ppt/pptx, pdf, ps, psd, ai, gif, png. Figures should be in their native format for best quality. Figures should be prepared in CMYK color. Maximum height: 240 mm. Maximum width (one-column figure): 82 mm. Maximum width (two-column figure): 171 mm. All authors are required to pay additional charges for color figures. Authors may elect to publish in grayscale in print and in color online for no charge. For more information on preparing figures, see OUP's Author Resource Centre on figures. Authors are encouraged to submit a graphical abstract as part of the article, in addition to the text abstract. The graphical abstract should clearly summarize the focus and findings of the article, and will be published as part of the article online and in PDF. The graphical abstract should be submitted for peer review as a separate file, selecting the appropriate file-type designation in the journal's online submission system. The file should be clearly named, e.g. graphical_abstract.tif. See this page for guidance on appropriate file format and resolution for graphics. Please ensure graphical abstracts are in landscape format. Note that graphical abstracts will be subject to any print reproduction charges that the journal levies for colour figures. Supplementary Material Supplementary Material may be submitted in the form of one or more files to accompany the online version of an article. Such material often consists of large tables, data sets, or videos that are not possible or convenient to present in print media. Supplementary Material represents substantive information to be posted on the ESA journal website that enhances and enriches the information presented in the main body of a paper; however, the paper must stand on its own without the need for the reader to access the supplementary information to understand and judge the merits of the paper. All Supplementary Material must be provided at the time of manuscript submission and will be distributed to reviewers as part of the normal peer-review process. It will not be edited during production and will be published as submitted. Supplementary Material should be: Referenced in the body of the main paper (e.g., Supp. Table S1), where a link will take the online reader to the file. Be labeled with an appropriate title and caption. Citations for any literature referenced within a Supplementary Material file should be listed in a References Cited section at the end of the file, even when a citation is duplicated in the main body of the paper. Videos should be kept to a reasonable size to facilitate downloading by readers. Species Authority, Order, Family, and Common Names Authors should provide the authority, order, and family for all organisms that are central to the paper (including plants, bacteria, and other non-arthropod organisms) at the first mention of the organism. It is the author's responsibility to provide accurate authority, order, and family information. Organisms mentioned in passing or whose importance to the paper is limited do not need to have full authority, order, and family listed, nor do mentions of common names of groups (e.g., mosquitoes, beetles, ticks, etc.). If a species name is included in the title of a paper, either the ESA-approved common name or the Latin name, the order and family should also be provided. If the order and family of an organism is provided in the title of the paper, it does not need to be provided again in the abstract and main text. If an organism is not listed in the title but is central to the paper, the order and family should be provided at first mention of the organism in both the abstract and the main text. The taxonomic authority of an organism that is central to the paper should be given the first time the organism is mentioned in both the abstract and the main text, but not in the title. For tables that include lists of species, authority should be given for each species if it is the first time it is being mentioned in the paper. If multiple organisms in the same genus are central to the paper, order and family only need to be provided for the first species mentioned in the genus. If multiple organisms are central to the paper, are in different genera, but are in the same order and family, order and family should be provided at first mention of each organism. If two organisms that share the same order and family are mentioned in the title or listed in the text of the paper together, the order and family should be placed after the first species listed and does not need to be repeated after the second species. A genus can be abbreviated after the first mention (except to start a sentence, in which case the genus should be spelled out). If two species belong to different genera but the genera start with the same letter, the first two letters can be used for abbreviations. If the first two letters of different genera are both the same, please spell out the genus name at each mention of the species. Only ESA approved common names should be used. Common names are lower case, except for proper nouns and their derivations. Statistics All data reported (except for descriptive biology) must be subjected to statistical analysis. Results of statistical tests may be presented in the text, in tables, and in figures. Statistical methods should be described in Materials and Methods with appropriate references. Descriptions should include information such as sample sizes and number of replications. Only t-tests, Chi square, and analyses of variance require no citation. Cite the computer program user's manual in the References Cited. Probit/logit When presenting results of probit/logit analysis, the following columns should be included in tables in the following order (left to right): n, slope + SE, LD (or LC) (95% CL), and chi-square. When a ratio of one LD versus another is given, it should be given with its 95% CI. Statistical tests to show what model best fits data intended to estimate the 99.9966% level of effectiveness should be presented to justify use of any model, including the probit model. Thus, we do not recommend use of a Word document. If a table contains on more than one page, repeat column headings on subsequent page(s). All columns must have headings. Leave no space between lowercase letters and their preceding values (e.g., 731.2ab). Do not footnote the title—use the unlettered first footnote to include general information necessary to understand the title (e.g., define terms, abbreviations, and statistical tests). Use approved abbreviations or abbreviations already defined in the text and define others in the general footnote. Use the following abbreviations in the body or column headings of tables only: amt (amount), avg (average), concn (concentration), diam (diameter), exp (experiment), ht (height), max (maximum), min (minimum), no. (number), prepn (preparation), temp (temperature), vs (versus), vol (volume), wt (weight) Jan (January), Feb (February), Mar (March), April, May, June, July, Aug (August), Sept (September), Oct (October), Nov (November), and Dec (December). Equations and text. Variance and sample size Include an estimate of the variance (or standard error) and sample size for each mean regardless of the method chosen for unplanned multiple comparisons. The use of Duncan's Multiple Range Test (DMRT) is not acceptable as a mean separation test as it was designed to be a very liberal test intended to find even minor differences in resistance between plant lines used for breeding. Model Analysis, Guidelines, Equations, and Computer Code Model Analysis At the beginning of the manuscript, authors should state clearly the goals of their model construction and analysis. Evaluation by reviewers depends upon these goals and the type of model. Authors should attempt to describe the main conclusions, limitations, and sensitivity of results to assumptions. For stochastic models, describe the variability in the results. Modeling Guidelines The following guidelines pertain to any mathematical model calculated for purposes other than statistical analysis. Authors must adequately describe both model structure and model analysis. Authors must explain and justify original equations and computer programs or justify the selection of a published software package used in the computation of models. Model structure and steps in the analysis must be described in the Materials and Methods section. Without presenting extensive computer code, the text must permit an understanding of the model that would allow most mathematically inclined scientists to duplicate the work. Present all equations that represent the biology of the system being modeled. Unless their derivation is self-evident, show how the equations were derived and mention the underlying assumptions. Express how the equations are solved over time and space. Provide references for standard techniques (e.g., matrix manipulation, integration). Define all variables and parameters in each equation and describe their units (e.g., time, space, and mass). In the Materials and Methods or Results section, present the range of parameter values included in the model, and describe the uncertainty in or range of validity of these values. Equations Consult Mathematics into Type for correct formatting of equations and mathematical variables. Italicize all mathematical variables. Validation or Testing of Model Results Data used for validation must be independent of data used to build or calibrate the model. Authors must state why the model did not require testing (e.g., theoretical study), why it cannot be tested (e.g., lack of data), or how it was tested. Structure of Computer Code For models solved or simulated by computers, mention the programming language and computer used. Describe the important numerical methods used in calculating the model (e.g., integration and random number generation). Mention how the program's logic and algorithms were tested and verified. When published software is computed, provide a reference and state which procedures were used. Discuss in any section of the manuscript the limitations of the published software. Original computer programs should be made available at the request of reviewers and readers. Gene Sequencing Inclusion of a GenBank/EMBL accession number for primary nucleotide and amino acid sequence data is required. Sequences from new species and new genes must indicate the proportion of the gene sequenced and should include data from both strands. The accession number may be included in the original manuscript or the sequence may be provided for review and an accession number provided when the manuscript is revised. Availability of Data and Materials Where ethically feasible, JEE strongly encourages authors to make all data and software code on which the conclusions of the paper rely available to readers. We suggest that data be presented in the main manuscript or additional supporting files, or deposited in a public repository whenever possible. Information on general repositories for all data types, and a list of recommended repositories by subject area, is available here. ESA journals are integrated with Dryad (www.datadryad.org), an online data repository. Upon submission, authors will be sent a link to easily deposit the full dataset(s) behind their research in Dryad. Datasets deposited in Dryad are given unique DOIs, linked to the corresponding paper, and are available to be reviewed by subject editors of the journal upon request. Depositing data in Dryad is optional. If you would like your paper to link to the dataset, data should be deposited prior to acceptance. Authors are required to pay Dryad for depositing data, but this fee is only charged if a paper is accepted. ESA members are eligible to request one of a limited number of waivers of the deposit fee. Please contact the ESA editorial office (pubs@entsoc.org) to request a waiver. Data Citation JEE supports the Force 11 Data Citation Principles and requires that all publicly available datasets be fully referenced in the reference list with an accession number or unique identifier such as a digital object identifier (DOI). Data citations should include the minimum information recommended by DataCite: [dataset]* Authors, Year, Title, Publisher (repository or archive name), Identifier *The inclusion of the [dataset] tag at the beginning of the citation helps us to correctly identify and tag the citation. This tag will be removed from the citation published in the reference list. ORCID JEE requires submitting authors to provide an ORCID ID at submission to the journal. More information on ORCID and the benefits of using an ORCID ID is available. If you do not already have an ORCID ID, you can register for free via the ORCID website. Preprint Policy Authors retain the right to make an Author's Original Version (preprint) available through various channels, and this does not prevent submission to the journal, however, preprint servers where papers are formally reviewed and a decision is issued will be considered previous publication and will not be accepted for review. Please note in the cover letter that the paper has been submitted to a pre-print server. For further information see our Online Licensing, Copyright and Permissions policies. If accepted, the authors are required to update the status of any preprint, including your published paper's DOI, as described on our Author Self-Archiving policy page. Immutable Advance Access JEE publishes articles online ahead of inclusion in an issue via OUP's Advance Access. In order to comply with the requirements of the International Commission on Zoological Nomenclature (ICZN) with regard to nomenclatural works, ALL articles published by ESA's journals, regardless of whether they include nomenclatural information, will be immutable; this means that no changes will be allowed to any article without the publication of an erratum clearly stating the changes that have been made. Therefore, it is the responsibility of the authors to carefully check their proofs for accuracy, and to notify the publisher of any changes that are necessary prior to Advance Access publication. Revised Papers For revised papers, we have a few more formatting requirements than we do for new submissions, to ensure the paper is ready for publication if it is accepted. Response to reviews Provide a document listing how you changed your manuscript in response to each point mentioned by the reviewers. If you did not implement a change suggested by a reviewer, please explain why. Style For any matters of editorial style not covered in these author guidelines, ESA Journals adhere to the Council of Science Editors (CSE) Style Guide. Figures Figures should be at least 300 dpi, or 600 dpi for line graphs. Maximum figure height: 240 mm. Maximum width (one-column figure): 82 mm. Maximum width (two-column figure): 170 mm. The quality in which figures are submitted is the quality in which they will print—please ensure figures are high quality. Each figure should be submitted as an individual file. Please do not copy and paste them into the main document. The following file types of figures are accepted: tif, eps, rtf, doc/docx, ppt/pptx, pdf, ps, psd, ai, gif, png. Figures should be prepared in CMYK format (not RGB). For more information on preparing figures, see Oxford University Press's Author Resource Centre on figures. References ESA journals use “Environmental Entomology” style in EndNote, or “Journal of Economic Entomology” style in Reference Manager. Please see the References section in these author instructions for examples. Measurements Use metric units. English units may follow within parentheses if needed. Nomenclature Give full scientific name and authority at first mention of each organism (including plants and non-insect animals) in the abstract and again in the text. Only use common names listed in the current ESA Common Names of Insects & Related Organisms online database. Common names should be lowercase, except for proper nouns and their derivations. When possible, please provide as much genetic and/or colony information available is useful (for example, “Rockefeller colony of Aedes aegypti (L.)”). Including geographic origin and generations in culture is also useful, but may not always be known and is not required. Submissions of Cover Photographs ESA's journals welcome submissions of inset photos for their covers. Photos must be of living (not pinned) insects and must be submitted as high-resolution (300 dpi or higher) image files. If you wish to crop your image to the exact dimensions of our cover, the dimensions to use are W: 219 mm x H: 203 mm; however, photos that do not match those dimensions can still be accepted. The insect species featured on the cover of a given issue must be mentioned in the issue in question. Photographers will be asked to give ESA one-time permission to use the photo on the journal cover and will retain their copyright of the photo. Submit photos to pubs@entsoc.org.

Insects is an international, peer-reviewed, open access journal of entomology published monthly online by MDPI. Open Access — free for readers, with article processing charges (APC) paid by authors or their institutions.; High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, and other databases. Journal Rank: JCR - Q1 (Entomology) / CiteScore - ... Indian Author Whatsapp Contact No.: 90538 55965 IJRDO Journal was founded in 2014. We provide a wide range of services like research publication, a research consultancy, conference proceedings, and publication in high-quality journals indexed in Scopus/web of science, research, and technical writing, but not limited to these. It is essential to include author(s) name(s), journal or book title, article or chapter title (where required), year of publication, volume and issue (where appropriate) and pagination. ... Individual journal guidelines can be found at the journal 'Instructions for Authors' page. ... sexual orientation, age, religion, or socio-economic ...
